***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "...a predetermined amount of irreversible deformation will be caused in the battery container..." is indefinite because a basis for predetermining an amount of deformation is not specified, and the conditions under which the deformation is caused are not specified. The temperature of the battery, for example, will affect deformation.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Shimakawa et al., US Patent 5,817,435.

Shimakawa et al. disclose a battery comprising two end plates (33) and a plurality of cells (10) stacked adjacent to each other and bound by the end plates. The

Art Unit: 1745

cells include a casing (12) of polyphenylene ether, polystyrene and preferably an elastomer. (column 3, lines 50-55,) The dimensions of the end plates and the binding members, which determine binding forces, are set in part by the number of stacked cells in the battery. (Column 6, lines 13-28.) The effect of the composition of polymer alloys on creep strain and elastic modulus was determined. (Column 7, lines 20-35.) These properties reflect compressibility and stiffness of the battery container. Suitable maximum amounts of deformation of the battery casings, which result in acceptable cycle lives for the batteries, were determined. (Column 9, lines 15-50.)

With regards to claim 2, it is noted from a comparison of Figs. 3 and 4, that the cells include a plate group, and the cells and the electrode plate groups are stacked in the same direction.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hamada, Shinji et al. US Patent 5,510,203 A

Schmidt, Jacob E. US Patent 3,769,095 A

Bingeman et al. US Patent 3,320,095 A

Owen US Patent 1,588,803 A,

disclose combined batteries comprising endplates binding a group of cells. The forces binding the batteries do not exceed a predetermined force which would cause mechanical damage to the batteries.
